

“CAN WE BALANCE ...”

FindABalancedSolution.com

- We must address the issue of climate change. But we must find the right solution.
- The wrong solution will place impossible financial burdens on the backs of hardworking Americans.
- Experts say our nation's growing electricity needs will grow beyond what renewables, conservation and efficiency can provide.
- The technical potential exists for the U.S. electricity sector, but no one technology will be a silver bullet, and much of it isn't available yet.
- A low-cost, low-carbon portfolio of electricity technologies can significantly reduce the costs of climate policy.

“... our growing energy needs?”

“... my mom's job?”

“... a blue sky?”

“... a cleaner world when I grow up?”

“YOU HAVE TO ... FOR US.”

“... THE ENVIRONMENT AND THE ECONOMY?”

A balanced solution makes sense for everyone – for businesses, for families and individuals, for our environment and our economy. Find out more, and find out what you can do to help.

Contact your elected official today and add your voice to the call for a balanced solution to climate change. Call 1-877-40BALANCE (1-877-40-225-2623).
